INTRODUCTION

This Indices is prepared for the use of readers of the Abridged Edition under the title of 'Cracking the Chinese Puzzles'. The contents of this book was originally a part of Volume 5 of the original work. As the Abridged Edition was already too voluminous consisting of 812 pages, this part was to be omitted.

Now that the author has prepared a translation - in fact, a rewriting in Chinese of the Abridged Edition, he thinks this Indices should be usable to the readers of both English and Chinese edition. However, it includes as well characters not included in the Abridged Edition which purports to teach only 3,650 characters obtained by him through a survey of 1.4 million characters in modern use excluding particularly those created in history for naming remote small rivers, mountains, towns and for superstitious reasons, personal names which have no else other meaning.

The author believes that simplifying Chinese Characters must also include making such characters of naming remote rivers, etc. obsolete and substitute them with ones of similar pronunciation which the authorities are gradually introducing. These unnecessary complications will be objected by any future learners, as they are all proper names and not known to people outside the region.

In order to fully appreciate the method invented by the author of locating Chinese characters in glossaries, the reader must know that 1) there are only 170 formations treated as Bushou (radical) in this book, whereas the ordinary dictionaries adopt 240 Bushou; 2) The Pinyin Method would require the learner first to know the pronunciation and to find the character, then he must again follow the respective tone order in order to find the character under search; 3) according to the traditional Four-corner Index Method, one numeral may denote more than 30 characters; 4) the conventional Telegraphic Code is arbitrarily arranged, and has no logic. This 'Axing the Bushou Method' is very convenient in use in conjunction with 'Cracking the Chinese Puzzles'. The learner can locate the required character entirely relying on its formation. The author, as the inventor, rightly claims it being the Fifth Method.

This work can be treated as a supplementary to the Abridged Edition of 'Cracking the Chinese Puzzles'. So in use the readers must familiarize himself with those formations accepted as Bushou on page 82-99 of the Abridged Edition or page 84-100 of the original work.

引 言

作者以英文著述《解开汉字之谜》一书，全书五册 3,244 页，便利英文读者学习中文用。以分析汉字字形为经，观念化、哲学化诠释汉字为纬，既可加快学习汉字，又能使读者彻底了解汉字如何会连绵三千年不绝，完全可用以表达现代思潮，所以作者称“汉字”为在指南针，火药，纸，印刷术之外，中国在上世界上之“第五大发明”。

经过统计，作者发现：如读者能识到 3,650 个汉字，已能看懂汉字报章百分之九十九·八，故将该书出版《简缩本》，也有 812 页之多，当时无从将原书第五册中 5,888 字《索引》列入，是为憾事。

今经友人怂恿，将该《简缩本》改写，译成中文，便利国人参阅。以汉字解释“汉字”原是一件难事，既已事成，作者为便利中文读者查用，将此《索引》编成中英文读者合用本。应用本《索引》，无须如：1) “部首检字法”，读者须先依顺查得部首，再计笔划，极易误计；2) 应用“拼音法”，须先知道读音，按字母顺序检到字后，须再分四声，逐声查看；3) 用传统“四角号码检字法”，因有时一个数号可概括三十余字，也要再查第五码；4) 至于传统电报编码，虽也按部首排列，更难于找寻。故作者称其发明之“部首切除法”为「检字法第五种」。

本《索引》是按作者的“部首切除法”编成，与《解开汉字之谜》一书合用，检字极为容易，惟读者必须先认识本书所谓之“部首”，只有 170 个，载于中文《简缩本》第 82 至 102 页，反之在一般字典中有 240 个以上。能应用本《索引》者应已熟悉 170 个部首形，所以本《索引》又为《解开汉字之谜》一书的附篇。

I. Four-corner Indexing Method

Below are patterns which are found at the four corners of a Chinese character; some of them may appear at any of the four corners while others could be limited to one or two corner positions, no matter whether it is in its Regular Script or *simplified form* :

Cipher	Name	Main Pattern	Subordinate Pattern
9	(Chinese) small	小	小 小 丩 ㄣ ㄣ
8	(Chinese) Eight	八	八 八 人 人 乚 ㄥ ㄣ
7	Corner	「 ㄥ ㄣ 」	ㄣ ㄣ ㄣ ㄣ ㄣ ㄣ ㄣ
6	Square	口 口	口 ㄣ
5	Thrust	丰	丰 丰 丰 丰 丰 丰 丰
4	Cross	十 乂	十 十 十 十 十 十 十
3	Dot or right slide	丶 丶	丶 ㄣ
2	Vertical or left slide	丨 丿	丨 丿 丿
1	Horizontal	一 (一)	一 ㄣ ㄣ
0	Head	ㄣ (ㄣ)	either of the unoccupied lower corners

When a corner carries any one of the named patterns, whether main or subordinate, the corresponding cipher is assigned to it. By going over all the four corners, a number index of 4 ciphers is obtained. The sequence is from upper left to upper right and then from lower left to lower right.

The only qualifying rule is that *when one pattern occupies two corners*, the second corner is given '0'. *A corner showing no conspicuous shape* will also take '0'.

For characters that have enveloping structures, such as: 冂, 冂 (simplified form: 冂) and 冂, the lower corners of the inner mini-character are taken for the third and fourth cipher.

一．四角号码检字法

汉字四角号码检字法，由发明到今天已历时63年。中间有人作了一个有很大贡献的修改，就是凡在一字下部有跨形不牵涉上部的，一律编为8或80。一个汉字必定有四个角。这四个角的笔形，尽于下表。其中有一些笔形可能把四个角包办了，也有一些要占及两个角，大部分是一角一形，它们可能是繁体或者简化体。

角 号	名 称	主要笔形	从属笔形
9	小 (中文)	小	灬 ㄣ ㄥ ㄨ ㄨ
8	八 (中文)	八	人 入 ㄥ ㄣ
7	角	ㄥ ㄣ ㄣ ㄣ	ㄣ ㄣ ㄣ ㄣ
6	方	口 口	口 ㄣ
5	插	丰	丰 戈 丰 丰 丰 丰
4	叉	十 乂	十 十 十 十 十 十
3	点或捺	丶 丶	丶 丶
2	竖或撇	丨 丿	丨 丨 丿
1	横	一 (一)	一 一 一
0	头	ㄣ (ㄣ)	形占两个角

凡一个角具有上述笔形，不论它是主要或从属笔形，就给予它相应的“角号”。给号的先后顺序是从左上到右上，然后左下到右下。四个角按此顺序给码后，就得到了一个字的四角检号码。

当一个笔形占有两个角时，第二角就给予角号“0”。一个角没有明显的形态时也给予“0”。

遇到一种笔形包办了四个角的结构汉字，如“口”，“門”（简化体是“门”）和“門”，就从包办体内部的微型汉字的下边两个角，获取一个汉字的第三和第四角号。

II. Rules to be Followed in Locating a Character in Ordinary Printed Style

- 1) By the 'Four-corner Indexing Method', the reader should work out a four-figure number and try to find the character concerned in ANN's Words List A.
- 2) If he cannot find the character, he should *axe* the Bushou from its habitual position and work out a new number, and again try to find it in ANN's Words List A. If unsuccessful, *axe* another Bushou when there is a further one in existence. Generally, the *axe* falls on the west, north or south position.
- 3) Whenever there are two Bushou in one character, the *axe* shall fall on the one that according to the Bushou List is more popular or that according to ANN's Morpheme Table A has a larger number of derivatives. (The reader will imperceptibly be enlightened of such popularity when he has been exposed to more Chinese characters).
- 4) If he still cannot find the character concerned in ANN's Words List A, despite one or two attempts, the reader has to take the remaining pattern to ANN's Words List B. There he will *definitely* locate the Chinese character in question. Note that this is not an exhaustive dictionary, but the reader will certainly locate every character in daily use.

二．确定一个普通印刷体汉字 四角号码的一些规则

1. 运用了“四角号码检字法”，读者就可以计出任何一个汉字的四个号码，这样读者就可在“安氏字表A”中试找这个汉字。
2. 如果找不到这个汉字，就应从它惯常的位置上切去“部首”，再计出一个新的号码，然后再从“安氏字表A”中试找它。假如仍然不成功，就去掉另一个距离较远的“部首”。一般地说，切去的“部首”是在左边，上边或下边。
3. 遇到一个汉字有两个“部首”的时候，切去的“部首”通常是“部首表”中最常见的，或者根据“安氏词素表A”有大量衍生字的字。
4. 假如作了一次或两次尝试，仍不能在“安氏字表A”中找到这个汉字，那就应该到“安氏字表B”中去找寻。当然先要切去“部首”，对余下的笔形给予一个新的号码，它也有四个角，所以仍可有一个四角号码，在传统上没有这样的给号法。但是应用这个方法，读者可找到全部常用字。通常这是一本详尽字典的任务。

注：这里所谓的“部首”限于《解开汉字之谜》内被公认的 170个“部首”，并非一般字典内用的 240余个“部首”。

EXAMPLES 举例

A . One Attempt 第一种情况

Character 汉字	Bushou Axed 须切去 的部首	Remaining Pattern 余下的 笔形	Morpheme Number 词素号	Character Number 字 号	Character Pronunciation 汉字拼音
京	—	京	0090	0769	jīng
右	—	右	4060	0259	yòu
五	—	五	1010	0192	wǔ
門 = 门	—	門 = 门	7700 = 3722	0054 0055	mén
八	—	八	8000	0133	bā
人	—	人	8000	0001	rén
去	—	去	4073	0109	qù
年	—	年	8050	0728	nián
鬥	—	鬥	7700	0108	dòu
知	—	知	8680	0301	zhī
因	—	因	6080	0440	yīn
愛 = 爱	—	愛 = 爱	2040	3635	ài
尖	—	尖	9080	4653	jiān
空	—	空	3010	3863	kōng kòng

B . Two Attempts 第二种情况

Character 汉 字	Bushou Axed 须 切 去 的 部 首	Remaining Pattern 余 下 的 笔 形	Morpheme Number 词 素 号	Character Number 字 号	Character Pronunciation 汉 字 拼 音
節 = 节	卩	卩 卩	7772 4422	0784 0785	j i é
刊	刂	干	1040	2605	k ā n
把	扌	巴	7771	0331	b ā
書 = 书	曰	書 = 聿 书	5000 5302	0165	sh ū
語 = 语	言 = 讠	吾	1060	3451	y ū
狀 = 状	月 = 𠂇	犬	4380	0654	zhu à n g
波	氵	皮	4024	4054	b ō
景	曰	京	0090	2133	j ǐ n g
恙	心	𦍋 = 羊	8050	3934	y à n g
躬	身	弓	1702	3860	g ō n g
財 = 财	貝 = 贝	才	4020	0798	c á i
宜	宀	且	7710	2938	y í
遙	辶	遙	B2077	5380	y á o
載 = 载	車 = 车	戠	B4305	4270	z ā i z à i

探	扌	桼	B3790	0373	t à n
賽 = 赛	貝 = 贝	寒	B3080	2975	s à i

C . Three Attempts 第三种情况

(在“安氏字表A”中有 255个,在“安氏字表B”中有65个会发生这种情况)
(about 255 characters in ANN's Word List A, 65 characters in ANN's Word List B)

Character 汉字	Bushou Axed 须切去 的部首	Remaining Pattern 余下的 笔形	Morpheme Number 词素号	Character Number 字号	Character Pronunciation 汉字拼音
謎 = 谜	言=i, 讠	米	9090	4910	mí mèi
聰 = 聪	耳, 心 耳	囟 总	2600 =8033	1580	cōng
漲 = 涨	氵, 弓 氵, 弓	長 长	7173 =4273	4166	zhǎng
個 = 个	亻, 口	古 个	4060 8020	1486 0286	gè
喫	口, 大	勹	B5702	1934	chī
薄	艹, 彳	尊	B5334	2862	báo bó
範 = 范	宀, 車 宀, 車	巳 巳	B7771	1120	fàn
攪 = 搅	扌, 見 扌, 見	見 見	B7737 B9037	5070	jiǎo

III. Guiding Principles of the Compilation of ANN's Word Lists

- First: The two lists are respectively in the numerical order of the Four-corner Index of Character Morphemes and Non-character Morphemes. (A fifth number adopted in the Conventional System is purposely omitted, since it is not too difficult to locate here *one particular morpheme out of a few* which may bear the same number, the occasions on which this happens are rare).
- Second: Under each character in the wake of each Morpheme or its derivatives are found one or two numbers which are the very *Character Number* and/or *Location Number* found in the margin of any particular page in Volumes 1 to 4 where the character concerned is explained. Note that a few have two Character Numbers or two Location Numbers. When there are two numbers, it is because the character has been briefly explained on the first occasion near the first number and gone into in more detail with its involvement in bisyllabic expressions at the location indicated by X plus a number.
- Third: Characters of *similar* pronunciation are grouped together.
- Fourth: ANN's Word List A contains nothing but Characters. With regard to any character, if by *axing* the Bushou the remaining portion or co-component becomes a *non-character* which may be called Non-character Morpheme it shall be found in ANN's Word List B.
- Fifth: The so-called similarity in the third principle is not guided by the consonant but by the *vowel*, irrespective of intonation. Even the vowels sometimes differ somewhat.
- Sixth: It is not uncommon that two to three derivatives with basically different pronunciations are grouped together, but the *axing principle* as explained in Chapter Five, Volume 1 and repeated again on the previous page is *never* violated.

- Seventh: When the derivatives of one Morpheme consist of several pronunciations in spite of the sixth principle, such characters are still grouped together, for they are few and are more exceptional than usual. (First, their meanings are still related or inter-related. Secondly, to separate them into several groups would only confuse our objective and is therefore meaningless).
- Eighth: The reader will *not* find in the two lists *obsolete* characters or rare characters which have no other use except to indicate rare surnames or first names of historical personages or geographical names of provincial rivers, mountains, counties or towns. For these, he must consult a dictionary.
- Ninth: In the Lists, the derivatives following the Morpheme or a first character are generally arranged according to the alphabetical order of their pronunciation, except *the ones immediately following* the Morpheme which are of the same pronunciation and intonation as the Morpheme.
- Tenth: The basic idea underlying the above arrangement is: first, to enable the reader to understand and memorize Chinese characters through *pattern analysis*; secondly, to show that the pronunciation of Chinese characters is to a large degree quite consistent and far from being arbitrary. These non-Bushou co-components are therefore traditionally called *sound component* or Sheng-pang (声旁) which is not 100% true. The author has discovered that rather they are meaningful co-components, a fact which is almost 100% correct when sensibly interpreted as this Book is attempting.

三．编辑“安氏字表”的指导原则

- 第一． A、B两表是分别按照汉字词素和非汉字词素的笔形的四角号码数字顺序编排的（传统四角号码检字法中有第五个码，应用“部首”切除法后，没有这个必要，故予省略）。
- 第二． 随在每一个词素号码后面有一个汉字和它的读音，跟着列出它的衍生字。每一个出现的汉字下边就有一个或两个数字。它们是那个汉字在本书里的字号和（或）字位，是在安氏著作《解开汉字之谜》一至四册的字页边上顺号排印着的号码。由此即可查到该汉字的解释。有些字有两个字号或两个字位。当有两个号码时，第一个号码是在教学过程中已经有过简明初步的介绍，第二个号码冠有X字母是在另一处详加说明的所在。
- 第三． 如此，发音相似的汉字被编排在一起了。
- 第四． “安氏字表A”中只包含现代用的汉字。少数的人名、地名、山川名不在其中。读者应注意任何汉字如果去掉“部首”，其余下的部分可能成为一个“非汉字”，叫做“非汉字词素”。它可在“安氏字表B”中找到。
- 第五． 在第三项原则中所谓“发音相似”，指的不是辅音，而是指元音，且也不考虑声调。其中，有时候元音也会有一点儿不同，所以被称为“声旁”，事实上并不如此。

- 第六． 将两、三个根本发音不同的衍生字编排在一起，是根据安氏著作《解开汉字之谜》第一册第五章所述“部首切除法”而来。
- 第七． 当一个词素的所有衍生字，发音不同而依然被编排在一起，因为这种字，为数很少也可说是例外。何况它们的意义依然有关或有内在的联系。如果把它们分散到不同的地方去，只会引起混淆，且毫无意义。
- 第八． 读者在两个字表中找不到那些被废弃了的或罕见的汉字，有些是罕见的姓氏或历史人物的名称，大部分是不出名小河川、小山峯、小城镇的名称。这些字需要到字典中去查取。
- 第九． 两个字表中，在紧随词素后面的衍生字，通常是根
据它们发音依照字母的顺序编列。那些紧随在词素后面，发音、声调与词素相同者，不在此例。
- 第十． 上述编排的基本概念如下：第一，使读者懂得和记住汉字的笔形分析；第二，显示汉字的发音有相当的一致性，並不乱来。那些非部首的部件通常被叫做“声旁”，这样叫法並非百分之百准确。作者发现，倒不如说它们是“有意义的部件”，这句话事实上却是近乎百分之百正确的，只需对每个部件能给予合理的解释，这也就是本书所做的空前尝试。

IV. ANN'S Word List A

This list takes its root from ANN'S MORPHEME TABLE A and *Morpheme Numbers* are also obtained by applying the Four-corner Indexing Method but prefixed by A or B in order to distinguish them from *Character Numbers*.

The derivative of a morpheme is the *Character Morpheme plus one* (or rarely two) of the 170 *Bushous*. One can generally find an invisible conceptual denominator or axle notion running through a morpheme and its derivatives.

Some morphemes that exist *alone* in the list could be incorporated into other more common morphemes as one of their derivatives, if not for the fact that the axed part would *then* be a non-Bushou, thus violating one of the Four Simple Rules of the *axing principle*.

The reader may possibly find a same character in two places either one in List A and one in List B, or both in List A. This is intended to assist the reader who may be baffled by its ambiguous nature, not knowing which Bushou is to be axed.

Morphemes in this List number 1,700. As a matter of fact, the actual number exceeds 1,700 because certain morphemes which have variants and simplified form are to be repeated under different numbers. This is just for the purpose of facilitating the users of the lists. However, one *Notion Character* is given only one number, no matter how many variants it has.

Note that **bold-faced Character Numbers** and **Location Numbers** are indication of the character being one of the 3,650 Frequently Used Characters (FUC) – see Appendix VI.

The following is the list:-

四．安氏字表 A

这个表是以“安氏词素表 A”为根据而产生的。词素号是应用“四角号码检字法”而获得。前面放了 A 或 B，是为了与“字号”区别开来。

一个词素的衍生字是由汉字词素加上 170 个部首中的一个（加两个是属于极少数）组成。人们通常能找到一个无形的观念分母或中心观念贯穿在某一词素和它的衍生字之间。

有些词素在表中单独存在，也会加上一个部首被并到其他更常见的词素中去，作为它的一个衍生字。

读者可能在两个地方找到同一个汉字，或者一个在表 A，另一个在表 B，或者两个都在表 A。这是想要帮助被迷惑的读者，当他分辨不出究竟应该切去那一个部首的时候。

在这个表中，词素的总数是 1,700 个。事实上，实际数目超过 1,700 个，因为某些词素有异体字和简化体，这就重复了某些词的词号。这样做是为了使用者方便。但无论如何，一个具有独立观念的汉字只有一个字号，不管它有多少异体字。

用黑体字印出来的字号和字位，是为了要指明这个汉字是 3,650 个常用汉字之一。

下面是表 A：

词素号 Morpheme No.	汉字 Character	读音 Pronunciation	衍生字 Derivatives
A 0010	亶 2417	dǎn	亶 dàn; 2417 臄 v. 2420 羴 shān; 2420 嬾 , 擻 shàn; 2421 2422

V. ANN'S Word List B

This list stems from ANN'S MORPHEME TABLE B. Unprecedentedly, Four-corner Indexing is also applied to these *Non-character* patterns, which have of course no pronunciation. Except for seven of them, all are Morphemes as well as Sound Components. All counted, about 860 characters are listed hereunder, this being less than 12% of the total number of characters adopted in this Book.

As indicated in ANN's Morpheme Table B, only 132 non-character patterns exist and each has at least two derivatives. The highest number belong to 繚 meaning 'irregular, abnormal, unusual' and 寮 meaning 'fire-light, outstanding' and count fifteen and thirteen derivatives respectively.

Note that **bold-faced Character Numbers** and **Location Numbers** are indication of the character being one of the 3,650 Frequently Used Characters (FUC) — see Appendix VI.

The following is the list:-

五·安氏字表 B

这个表源自“安氏词素表 B”。前所未见的是把四角号码检字法也应用到这些非现代的汉字笔形上面去，它们当然是没有发音的，其中除了七个笔形之外，全部是被叫做声旁的词素。点了一下数，大约有 860 个汉字表列在下面。这一条略少于本书所采用汉字总数的 12%。

著者在“安氏词素表 B”中指出，这样的非汉字笔形只有 132 个，每一个至少有两个衍生字。有最高衍生字数的词素 B 是意“不规则的、反常的、异常的”的‘𠂔’和意“火光、凸出的”的‘𠂔’，前者有十五个，后者有十三个衍生字之多。

用黑体字印出来的字号和字位，是指明这个字是全书第五册内说明的 3,650 个常用汉字之一。

请看下面就是安氏字表 B：

COMMENTS RECEIVED

'If this book had been published when I first started learning Chinese, my task would have been simpler'.

Dr. Lee Kuan Yew,
Prime Minister, Singapore.

'Having spent a good many years of my life teaching foreign students Chinese, I am acutely aware of the paucity in material suitable for the teaching of Chinese characters. It looks as if this long-felt need is at last being satisfied in the form of your new work'.

Prof. D. C. Lau,
Chinese Language Research Centre,
Institute of Chinese Studies,
Chinese University of Hong Kong.

'It is indeed a useful and practical, as well as a timely publication, which, it seems to me, is not just a textbook of the language, but also a well-selected compilation of both its modern and traditional usages. I need hardly add how impressed I am with your new approach to the study of the Chinese language and the ingenious way in which you handle the analysis of the characters and expressions'.

Prof. Ma Meng,
Department of Chinese Studies,
University of Hong Kong.

'Your distinguished effort of mastering the pattern and meaning of 170 Bushous is very impressive. Through your logically separation of the singletons from bisyllabics, one can easily comprehend the varied meanings of the selected 5,888 Chinese characters. It is true that using the right approach learning Chinese will be more amusing than struggling. Your suggestion of logical association of ideas rather by arbitrary memorizing the Chinese language has proven to be the smartest way'.

Dr. Chen Y. Chen,
Chairman,
Northern Ohio Chapter,
The Institute of Management
Sciences,
U. S. A.

'In reading through the pages, I cannot help but admire your scholarship and drive in producing this great work. The innovative system you have derived will no doubt be a great help to learning and understanding our Chinese characters'.

Dr. Ma Lin,
Vice-Chancellor,
Chinese University of Hong Kong.

'Quite apart from the very important aspect of teaching one to learn the language, you draw away some of the mists and clouds and allow one to glimpse the beauties of Chinese culture and civilization. A living history from ancient times to the present is unfolded. The development and even evolution of the characters and their meaning are life. It is the life of a people that is conveyed through them. Your work is like a smooth flowing river, it is a river of time and communication'.

Prof. F. P. Lisowski,
Department of Anatomy,
University of Hong Kong.

'I am impressed by your innovative method of introducing expression through characters, one idea leading to another proceeding in an orderly manner'.

Prof. Lü Shu Xiang,
Honorary President of Institute of
Linguistics,
Chinese Academy of Social
Sciences,
Beijing.

'You have an unique way of analysing the Chinese characters. The obscurity of the characters are now being exposed by you in a humorous way making the reader understand it without difficulty and with a smile. This is really an unique method'.

Mr. Zhou You Kwong,
Committee for the Reform of
Chinese Written Language,
Beijing.

'The process of mathematical language developing to natural science and the evolving of Chinese language to humanity represent two different ways of great logical thinking. Although numerous books have discussed and analyzed the logics of mathematics, so far as I know, your book is the only book that deals with the logics of Chinese language and handles the task with such elegance and effectiveness. I feel your book will benefit both Chinese and Westerner (or non-Chinese). The wisdom of Chinese people and the beauty of Chinese culture lies in the Chinese written language'.

Prof. Y. W. Chan,
University Science Centre,
Chinese University of Hong Kong.

'To crack Chinese Puzzles becomes now possible even for me thanks to your splendid and unique concept'.

Dr. Hans J. Dietrich,
German Consul-General,
Federal Republic of Germany.

'Yours is certainly the first book of its kind. I am sure your efforts in this direction would enhance the better understanding and communication between the English and the Chinese speaking worlds'.

Dr. Ambrose Y. C. King,
College Head,
New Asia College,
Chinese University of Hong Kong.

'I am really delighted to have them. The last defence between me and the learning of Chinese has now gone'.

Mr. Peter Burbidge,
Chairman,
East Asian History of
Science Trust,
England.
