

The Chart of Current Status for Second Stage Simplification in Unicode

Alexander Zapryagaev

Version 2.0 (First Public Version)

Second stage simplifications were an abortive project of PRC government in late 1970s. They were supposed to become a continuation of the highly successful campaign of simplifications implemented throughout the 1950s-60s. They were made of two parts:

- Part One was released on 20th December 1977 and was consistently used in 人民日報 until July 1978. It was widely used in publications and gained mass currency, but was suddenly announced a failure and practically stopped, with an official withdrawal (but not declaration of abandoning any simplification plans) on 24th June 1986. Many of these were previously existing popular forms and/or remained in popular use after stopping the project.
- Part Two was published simultaneously with Part One but was judged not for immediate use but for implementation in case first succeeds. As we know, it failed.

Since Andrew West's inaugural proposal of soon to be 10 years ago:

<http://std.dkuug.dk/jtc1/sc2/wg2/docs/n3695.pdf>,

there has been a journey towards encoding these in Unicode, for uses such as correctly representing the texts published during the short implementation, as well as rendering correctly the ancient texts which used the forms sometimes taken as inspiration. However, since then some of the characters were successfully encoded, and the original proposal did not include explicit generalizations of schemes offered as generic simplifications, and contained a small number of unfortunate misprints. Hence, I believe there is now time to review the charts against the current information and remake the list with as much data as possible.

The fonts used in this document for glyph representation are a deliberate mix. All glyphs encoded in Unicode were attempted to be rendered in Source Han Sans by Adobe (Mainland flavour), wherever possible (in case of URO, it is possible, though a negligible number of forms were rendered not in PRC-normative ways). Otherwise, the fonts BabelStone Erjian 1 & 2 by Andrew West, being the very first attempt to provide a tool of typing second stage simplifications. The fonts are used in v. 1.1.1 (2019-07-19). BabelStone Erjian family encodes second stage simplified forms at the locations of their non-simplified analogs. These fonts now cover the whole table of TGH list released by PRC in 2014. Unavoidably, due to the large amount of work, some unfortunate errors

may still persist in that project as well as the current list, and we are open for correction in further versions.

All glyphs are notated with [TGH X] referring to it being in top 3,500 (X = 1), top 6,500 (X = 2) or top 8,105 (X = 3) glyphs designated by PRC in Tōngyòng Guīfān Hànzìbiǎo. Some are marked with [GB 2312]; this means one of 125 glyphs included in the National Standard GB 2312 but absent from TGH, mostly radicals and radical-forms. Any others (notated [UNUSED]) are marked with one or more of the letters HMTJKP if they were included into the core lists for Hong Kong, Macao, Taiwan, Japan, South & North Korea respectively, according to Dr. Ken Lunde's proposal IICore2020:

<http://appsrv.cse.cuhk.edu.hk/~irg/irg51/IRGN2334IICore.pdf>

Unicode codes are provided for both original and simplified forms, and IDS for non-encoded ones (approximated IDS for wildly unusual forms). Additional usage details are provided as they appear. Numbering follows Andrew West. The text is typeset in EB Garamond. Mono font is Source Han Mono.

¹ The situation with this character is peculiar. Historically, 燉 and 炖 represent different words:

- 燉, made phono-semantically from semantic 火 ‘fire’ and phonetic 敦 [twən] ‘solid, honest’/[twəʃ^h] ‘grain vessel’, was used for morphemes <dùn> ‘to stew’ as well as to spell the name of city and county Dūnhuáng 燉煌 in Gānsù (normally 敦煌, representing Sogdian θurwān).
- 炖 possessed reading tún and meaning ‘windy and flaming’ or ‘red’.

The original simplifications do not mention either. However, in practice, 燉 ‘to stew’ was completely replaced by 炖 which lost its former usage (Dūnhuáng is normally spelt differently), but not in Traditional-using localities, turning into a *de facto* T-S pair. Thus, the second simplification in fact attempted to formalize the currently existing distribution, not introduce radical innovation.

¹⁴ Apparently, in modern usage it is U+64B4 擻 that is considered normal, and, anyway, it is not used outside Cantonese word 擻氣 dan³hei³ 'release pent-up emotions'; with 擎 being, strictly saying, its Kangxi-savvy form, never used. Why PRC decided to normalize an old dictionary's form of a character actually not used save Yue? Who knows...?

Appendix B: Sample of polymorphemic words simplified in the lists

Part One

It contains seven words:

- 1) *bìjī* 哔叽 [TGH 2, TGH 1] ‘serge’ > 毕几 [TGH 1, TGH 1];
- 2) *dǒugōng* 料拱 [UNUSED HKMPT, UNUSED HMT] ‘dougong, interlocking wooden brackets’ > 斗拱 [TGH 1, TGH 1] – a rare case of second simplification actually working, as 2001 *The First Series of Standardized Forms of Words with Non-standardized Variant Forms* chose exactly the proposed simplification;
- 3) *kǎjī* 卡叽 [TGH 2, TGH 1] ‘khaki’ > 卡几 [TGH 1, TGH 1] – now normally spelt 卡其 *kǎqí*, thus partially implementing the spirit;
- 4) *kēdǒu* 蝌蚪 [TGH 1, TGH 1] ‘tadpole’ > 科斗 [TGH 1, TGH 1];
- 5) *ménglóng* 朦朧 [UNUSED HJMT, TGH 3], 朦胧 [TGH 1, TGH 1], 蒙眈 [TGH 1, TGH 2] ‘dim, hazy’ > 眈(蒙)龙 [TGH 1, TGH 1];
